Lifting and Lashing

**NEW
2014**

Content

Strength through innovative profile

pewag is the technological innovator and first manufacturer world-wide to offer a G12 lifting chain program since 2003 with its unique and intelligent profile design in highest quality.

The pewag winner pro chain system can be used for overhead lifting, lashing applications and for severe applications.

Welcome to the pewag group

We are an internationally operating group of companies. Our track record goes back to the year 1479.

Mission Statement

pewag group's Mission Statement expresses the goals of our actions as follows:

With our joy for innovation, we ensure that all products of the pewag group are the best in the respective markets, both now and in the future. The high quality of our products and services as well as our employees' passionate dedication are the foundation to our pursuit of outstanding services and complete customer satisfaction.

Principles of pewag group

Leading in Quality

The values of our premium product brands are demonstrated by our first class quality and innovations and are communicated consistently and coherently.

We anticipate market demands and changes in the environment and adapt our strategies, organizations and actions accordingly to satisfy our customers' needs through providing the best value for the money; timely delivery; efficient and obliging service.

Leading in Responsibility

We commit ourselves to careful treatment of the environment, by reducing the use of energy and raw materials, ensuring the longevity of our products and making them recyclable.

We value an open, honest and team-oriented work-style, which is based on transparent communication honoring ideas, opinions and experience of our employees as valuable inputs for our decision making process.

We strive for stable and fair partnerships with our employees, customers, suppliers and other business partners and take social aspects into consideration when making business decisions.

Leading in Technology

We secure our technological leadership through highest product quality, constant improvements and innovations of products, as well as manufacturing processes.

We are dedicated to keep on top of product technology. This ensures that our customers always have the best solutions available and that we expand and protect our market position.

Leading in Economics

In all our processes we use due diligent business practices and efficiency and strive to improve these continuously.

In the long-term, we will continuously increase our economic performance to raise corporate value, achieve sustained growth and thus secure a successful future of the organization.

We are a modern group of companies which looks back to a tradition and experience of more than 500 years. Since our founding years, a lot has changed, but the values that made our success possible from the beginning remain.

**pewag group –
Innovation. Quality. Partnership.**

History of the pewag group

Advantage through tradition

The history of pewag group goes back to the 15th century and therefore makes us the oldest chain manufacturer worldwide. With our experience we are ready for the future.

Timetable of important events

- 1479** First documented references of a forging plant in Brückl
- 1787** Foundation of a chain forge in Kapfenberg
- 1803** Foundation of a chain forge in Graz
- 1836** Establishment of an iron casting plant in Brückl
- 1912** Production of the first snow chain in the world
- 1923** Merger of plants in Graz and Kapfenberg –
Creation of the name “pewag”
- 1972** Foundation of a sales company in Germany
- 1975** Foundation of a sales company in the USA
- 1993** Foundation of pewag austria GmbH
- 1994** Foundation of the first subsidiary in Czech Republic
- 1999** Acquisition of the Weissenfels Group
- 2003** Separation from the Weissenfels Group
- 2005** Reorganization into 2 groups:
Schneeketten Beteiligungs AG Group – Snow Chains
pewag austria GmbH Group – Technical Chains
- 2009** Acquisition of Chaineries Limousines S.A.S.
- 2012** Foundation of the first manufacturing company
in the USA
- 2013** Foundation of various international sales companies

Lithography forging plant Brückl 1855

Anchor chain forge 1878

Chain forgers 1956

Quality management

Our main goal is customer satisfaction.

In this instance, quality means that only those products and services are developed, manufactured and delivered which completely and without compromise satisfy the customer. The pewag group's quality policy, is underlined by the following basic principle: **“we supply high-end products and services to our customers that conform to the technical standards and requirements”**, can be summarised in the subsequent four points.

Market-oriented Quality

In order to maintain and to widen the competitive position of the pewag group, the quality of finished goods and services must be consistent with the specifications of the customer and also with their expectations of a technological leader. No product should ever pose a danger to people or the environment.

Economic Quality

As a profit-oriented company, quality is achieved by taking into consideration the material, personnel and financial resources; this means that we establish an appropriate best price/performance ratio for the customer within the acknowledged framework.

Quality Responsibility

Stringent demands are placed on all employees to ensure high standards of quality. No matter what hierarchical level, all managers are in charge of managing quality. Every employee within the pewag group should be educated, motivated and instructed by the management team. It is important for promoting high quality awareness that the education and training of employees is at the forefront, as each employee is responsible for the quality of his/her own work.

For each of our employees, the statement **“QUALITY STARTS WITH ME”** must be true!

Process-oriented Quality

The close interaction between sales, product development, production and customer service is regulated within the individual companies by fixed processes and activities, as well as responsibilities with the aim to reach and maintain the defined quality standards.

Business areas

Working with pewag products

The pewag group has a substantial and diverse spectrum of products and services.

Our range of products varies from traction chains for tires (snow chains for passenger cars, trucks and special-purpose vehicles, tire protection chains for mining vehicles) over different industrial chains to products for the do-it-yourself sector (light chains, belts, etc.)

Segment A
Snow and forestry chains

Segment B
Hoist and conveyor chains

Segment C
Do-it-yourself

Segment D
Engineering

Segment F
Lifting and lashing chains and accessories

Segment G
Tire protection chains

Environment – we take responsibility

Ecological awareness in all areas

Our company's manufacturing location in Kapfenberg, Austria, has been used for iron and steel production for over 270 years. A second facility located in Brückl, Austria, was first documented in records dating back to 1479.

Based on this long

manufacturing tradition, we take serious responsibility for our products, employees and the environment at all our international locations. Hence, one of our major concerns is to improve energy efficiency and, in doing so, to minimise energy consumption over a long period of time with the development of new production technologies. An important goal is to increase energy efficiency and consequently lower energy demand. Consequently, we develop our products to achieve longer product life-cycles and lower weight but simultaneously, increasing their working load capacities and the safety for our customers. We are committed to upholding all relevant energy and environmental standards by setting clearly defined goals and continually improving our performance. To achieve this goal, we use modern manufacturing technologies. An important step is to provide the necessary resources and to include our employees in the process. We are convinced that well-informed and motivated employees can actively participate in environmental conservation.

Wherever we are unable to avoid an environmental impact, we have set ourselves the goal to continually reduce our energy consumption, waste and environmentally harmful emissions. When purchasing new equipment, we strive to find the best and most efficient technical solution possible. It is important for us to promote the purchase of energy efficient products and services.

Our process-oriented management system regulates the documentation concerning all environmental relevant procedures. It also encompasses preventative measures for possible failures, as well as behavioural instructions for regular and/or extraordinary operational procedures. By systematically monitoring and assessing our environmental activities, we are quickly able to resolve deviances and to take corrective action. This process extends throughout the whole organisation to optimise all business processes. We strive to engage in an open dialogue with our customers, neighbours and authorities to inform them of our energy and environmental engagements.

Through specific communication we want to inform our customers about the environmental aspects of our products – specifically inform them about the longevity of our products. Through meaningful communication, we strive to motivate our suppliers and customers to think – in turn – about their environmental footprint and to put into practice similar environmental standards in their businesses.

Customer proximity

International presence

In the ambitious five-hundred year history pewag has evolved from a small and modest company to a global organization with several subgroups.

With 11 production and 31 sales and other locations on the continents of Europe, America, Africa and Australia pewag documented its claim as the world's number one chain manufacturer.

In addition to the numerous locations pewag as an international company relies on his capillary, strong, and professional partner network. These collaborations provide optimal customer service in currently more than 100 countries around the world.

Example of order	21

Chain and Accessory System in G12

Advantages and information

Features and benefits of pewag lifting chains in G12 quality

The higher Working Load Limits (WLL) of the pewag winner G12 program (50% more compared to G8 programs) allows significant weight reduction. Reducing the weight of the chain sling makes the assembly easier to use for the end-user. Additionally, the profile of the chain improves the bending resistance of the chain. This is significant when loading the chain over a corner.

- **Intelligent profile** – because of the intelligent use of material, the major characteristics of the chain (i.e. fatigue resistance and bending resistance) were improved in a remarkable way, when you compare the same cross section of the profile chain versus the round steel chain. In order to reach the best mechanical performance, the material use was optimized on effective areas (blue area) and reduced on less relevant areas (red area)

- **Optimized bending resistance:**

The section modulus which is important for preventing undesirable bending deformation is up to 16% higher with the profile chain compared to round steel chain with the same cross section. Therefore the max. stress in the chain is reduced (no red areas)

- **50% higher load capacity** compared to G8, **20% higher load capacity** compared to G10

- **Obvious weight reduction** and consequently easier handling

Load capacity [kg]	Previous chain weight [kg]	pewag winner pro chain weight [kg]	% Reduction
3.350	16,60	9,37	44%
4.250	16,60	11,80	29%
7.100	28,53	19,19	33%
11.200	43,61	34,10	22%

- **One dimension smaller** compared to G8 and G10 chain slings for many load ranges – thus providing excellent value.

Load capacity [kg]	Previous chain-ø	pewag winner pro chain-ø
4.250	10 mm	8 mm
7.100	13 mm	10 mm
11.200	16 mm	13 mm

- **Patent-registered material** with optimized strength and toughness properties at both high and low temperatures

- **Weight based performance** – pewag winner pro represents the „Formula 1“ of technical chains

- **Longer lasting** due to higher wear resistance and less abrasion
- **Innovative chain system** that due to its ruggedness can be used for many applications not just for lifting or lashing
- **Complete traceability** – chains and components are stamped with an identification mark so that the whole production process can be tracked
- **Easy visual identification** due to profiled chain and G12 marking on every link
- **Corrosion protection** by means of light blue powder coating of chains and components. pewag offers as an alternative the proven coropro coating (PCP) for pewag winner pro G12 chains for a maximum corrosion protection. Please find further details in our special folder
- **Maximum security** due to novel identification tag made from stainless steel with warning notes
- **Quality approved European production** by an ISO 9001 certified company
- **Worldwide distribution network** – easy delivery of spare parts – premium service
- **Experience** – pewag is the first supplier of an innovative G12 chain system

pewag winner pro Data

- **Chain quality:** pewag winner pro meets the PAS 1061 standard with modifications (higher mechanical and impact strength values, reduced application temperature)
- **Stress at load capacity limit:** 300 N/mm²
- **Fatigue test:** 20.000 cycles at 450 N/mm² nominal stress
- **Test stress:** 750 N/mm²
- **Breaking stress:** 1.200 N/mm²
- **Breaking elongation:** min. 20% regardless of surface
- **Bending:** 0.8 x d
- **Stress crack corrosion:**
Harmless against stress crack corrosion acc. to PAS 1061
- **Impact strength toughness:** 42J at -60°C
- **Admissible operating temperature:** -60°C – 300°C (please note WLL reduction at high temperatures)
- **Quality grade stamping:** pewag winner pro chain – 12 resp. 120 at a distance of 300 mm apart and 12 on the back of each link pewag winner pro components – 12
- **Manufacturer's Name or Symbol:** D16 and/or pewag
- **Surface:**
Chain – light blue powdercoated – RAL 5012 or black coropro (PCP) coated – similar to RAL 9005
Components – light blue powdercoated – RAL 5012
- **Working load tag / Identification tag:** all the required data is shown on the tag. A specially shaped tag was created for easy identification and avoidance of confusion
- **Compatibility:** pewag winner pro chains and components have only limited compatibility with chains and components of other suppliers. Compatibility should be checked in advance with the manufacturer

pewag winner pro History

- 1997** Commencement of development of a profiled and case-hardened hoist chain
- 1998** Approval of profile hoist chain by German employer's liability insurance association in accordance with EN 818-7 for chain type DAT with H16 as the first manufacturer worldwide
- 2000** Use of profile hoist chain in series production
- 2001** Development of the next generation of chains and accessories in G12
- 2003** G12 program was established successfully in the US market - first company worldwide
- 2004** Patent specification for high-performance chain steel for manufacturing G12-chains PCT/CH 2004/000568
- 2004** Pinnacle Award – prestige award for the most innovative product in the lifting industry from the renowned US magazine „Lift and Access“
- 2004** Utility model specification no. AT 006 802 U1 for lifting chains with break stress of 1.200 N/mm²
- 2008** Approval of pewag winner pro chain system G12 by German employer's liability insurance association – Authorization for marking „D16“
- 2008** 5th anniversary of G12 program on the occasion of CeMAT 2008 in Hannover

pewag winner pro Identification

All necessary technical data is attached on the chain ID Tag.
For easier identification of the chain grade and quality a separate ID Tag is used.

pewag winner pro - old chain ID Tag:

The benefits you will enjoy as a result of this new safety feature are:

- Looking at the identification tag before each lifting procedure becomes unavoidable thus reducing erroneous assessments of the lifting chain's carrying capacity
- When the marking is not observed, the lifting chain will be classed as a maximum grade 4
- Corrosion-resistant: therefore resistant to solvents, acids, caustics and their vapours
- Easily replaceable due to the rustproof cable with quick fastener
- All information is engraved allowing for customer-specific markings
- Pre-stamped year dates for the periodic inspections make it immediately apparent when the last inspection took place. For the periodic inspection it is only necessary to stamp the month

New rectangular lifting identification tags

During the first half of 2014, pewag will change the design of the lifting identification tags to a rectangular shape made of corrosion-resistant material attached to the sling with an undetachable, rustproof quick release fastener. Through this measure, pewag has taken another great step forward towards establishing better safety.

Within all norm documents for lifting chains, the number of corners that the identification tag features corresponds to the grade category of the lifting chain. Many users of lifting chains use this and the chain dimensions to estimate the load carrying capacity of the lifting chain without taking the markings (stamping) on the identification tag into consideration. This can lead to more serious consequences; for example when a component of lower grade classification – and therefore of lower carrying capacity – or a component with differing characteristics than the recommended classification on the identification label, e.g. operating temperature, is built in.

We pursue the goal of continuously increasing the user's safety.

pewag winner pro load capacities, Demanding conditions, Example of order text

Informations

pewag winner pro load capacities

The load capacities listed are maximum values of the various sling types, stated according to the standard (Uniform Load) method of rating.

Safety factor 4	I-leg chains		II-leg chains		III- + IV- leg chains		III- + IV- leg chains	
								
Angle of inclination β	-	-	0°–45°	45°–60°	0°–45°	45°–60°	0°–45°	
Load factor	1	0,8	1,4	1	1,12	0,8	2,1	
Code	d	Load capacity [kg]						
WINPRO 7	7	2.360	1.900	3.350	2.360	2.650	1.900	5.000
WIN 7	7	1.900	1.500	2.650	1.900	2.120	1.500	4.000
Ni 7 G8	7	1.500	1.200	2.120	1.500	1.700	1.200	3.150
WINPRO 8	8	3.000	2.360	4.250	3.000	3.350	2.360	6.300
WIN 8	8	2.500	2.000	3.550	2.500	2.800	2.000	5.300
Ni 8 G8	8	2.000	1.600	2.800	2.000	2.240	1.600	4.250
WINPRO 10	10	5.000	4.000	7.100	5.000	5.600	4.000	10.600
WIN 10	10	4.000	3.150	5.600	4.000	4.250	3.150	8.000
Ni 10 G8	10	3.150	2.500	4.250	3.150	3.550	2.500	6.700
WINPRO 13	13	8.000	6.300	11.200	8.000	9.000	6.300	17.000
WIN 13	13	6.700	5.300	9.500	6.700	7.500	5.300	14.000
Ni 13 G8	13	5.300	4.250	7.500	5.300	5.900	4.250	11.200

If the chain slings are used in severe conditions (e.g. high temperature, asymmetric load distribution, edge load, impact/shock loads) the maximum load capacity values in the table must be reduced by the load factors on page 20.

Please also note the user information on this topic.

III- + IV- leg chains	III- + IV- leg chains with load distributor		Endless chain sling	Single lifting sling		Double lifting sling	
							
45°–60°	0°–45°	45°–60°	-	0°–45°	45°–60°	0°–45°	45°–60°
1,5	2,8	2	1,6	1,4	1	2,1	1,5

VMWP Enlarged master link assembly

Corresponds to EN 1677-4 with load capacity according to G12.

For pewag winner pro connex systems. Enlarged master link assembly for assembling II-leg, III-leg and IV-leg chain slings with connecting links.

Appropriation to chain dimension according to table.

	Code	Con- sisting of	Usable up to single hooks following DIN 15401 No.	WLL 0–45° [kg]	e [mm]	d [mm]	t [mm]	w [mm]	d1 [mm]	t1 [mm]	w1 [mm]	Weight [kg/pc.]	For II-leg chain slings	For III- and IV-leg chain slings

Accessories in G12 – Lifting

Product overview

CWP Connex connecting link

Corresponds to EN 1677-1 with load capacity according to G12.

For pewag winner pro connex system.

Connex connecting link for easy assembly of chains, master links, master link assemblies and components.

CWP Connex connecting link	Code	WLL [kg]	e [mm]	c [mm]	s [mm]	t [mm]	d [mm]	b [mm]	g [mm]	Weight [kg/pc.]
	CWP 7	2.360	63	12	13	16	9	47	17	0,13
	CWP 8	3.000	62	14	15	20	10	58	20	0,30
	CWP 10	5.000	78	18	21	25	13	66	22	0,55
	CWP 13	8.000	107	22	25	34	17	84	25	1,24

AGWP Load distributor

For assembling IV-leg slings with connex connecting links, possibly all four legs can be considered as carrying. If two II-leg slings are used at the same time and one of them is provided with a load distributor, this system possibly can also be considered as a IV-leg sling where all four legs carry the load. Because of higher WLL compared to standard IV-leg slings, keep attention to the WLL of the master link assembly. Turning by 180° after achieving the elimination criteria possible – double lifetime! Read operating manual carefully!

	Code	Connex*	WLL 0°–45° [kg]	WLL 45°–60° [kg]	a [mm]	e [mm]	d1 [mm]	d2 [mm]	h [mm]	h1 [mm]	Difference L1/L2 [chain links]	Weight [kg/pc.]
AGWP Load distributor 	AGWP 7/8	CWP 10	4.250	3.000	210	51	22	25	15,5	14	6 for 7 mm chain 5 for 8 mm chain	1,75
	AGWP 10	CWP 13	7.100	5.000	180	32	25	32	23	15,5	4	1,56

* Please use this connex to assemble the load distributor onto the master link assembly.

Static test coefficient = 2.5 x carrying capacity of the respective chain section; safety factor = 4

HSWP Eye sling hook

Corresponds to 1677-2 with load capacity according to G12.

For pewag winner pro connex system.

For general lifting applications. All hooks with forged and galvanised safety latch.

HSWP Eye sling hook	Code	WLL [kg]	e [mm]	h [mm]	a [mm]	d1 [mm]	d2 [mm]	g1 [mm]	b [mm]	Weight [kg/pc.]
	HSWP 7/8	3.000	106	27	19	25	11	26	88	0,50
	HSWP 10	5.000	131	33	26	34	16	31	108	1,10
	HSWP 13	8.000	164	43	33	43	19	39	132	2,20

LHWP Safety hook

Corresponds to EN 1677-3 with load capacity according to G12.

For pewag winner pro connex system.

Safety hook with larger opening than the eye sling hook. Closes and locks automatically under load. Ensures high level of safety.

LHWP Safety hook	Code	WLL [kg]	e [mm]	h [mm]	a [mm]	b [mm]	d1 [mm]	d2 [mm]	g1 [mm]	s max. [mm]	Weight [kg/pc.]
	LHWP 7/8	3.000	126	25	25	89	25	14	34	1	0,90
	LHWP 10	5.000	158	31	28	112	31	17	45	1,5	1,60
	LHWP 13	8.000	205	41	34	145	40	22	54	2	3,30

PWP Grab hook

Corresponds to EN 1677-1 with load capacity according to G12.

For pewag winner pro connex system.

For shortening and for building baskets that must not tighten.

Special design of the chain contact area for optimal interaction between chain and hook.

PWP Grab hook	Code	WLL [kg]	e [mm]	b [mm]	d1 [mm]	d2 [mm]	g1 [mm]	Weight [kg/pc.]
	PWP 7/8	3.000	68	63	18	11	10	0,48
	PWP 10	5.000	88	81	22	14	13	1,03
	PWP 13	8.000	110	103	26	18	17	2,10

KHSWP Clevis sling hook

Corresponds to EN 1677-2 with load capacity according to G12.

For pewag winner pro clevis system. For general lifting applications.

All hooks with forged and galvanised safety latch.

Alternative to eye sling hook HSWP with wider throat opening.

KHSWP Clevis sling hook	Code	WLL [kg]	e [mm]	h [mm]	a [mm]	d [mm]	g1 [mm]	b [mm]	Weight [kg/pc.]

Direct lashing Table	40
Frictional lashing Table	41

Lashing in G12

Advantages and information

Features and benefits of pewag lashing chains in G12 quality

The higher lashing capacity (LC) of the pewag winner pro G12 program (50% more compared to G8 programs) allows significant weight reduction. Reducing the weight of the lashing chain assembly makes it easier to use for the end-user. Additionally, the profile of the chain improves the bending resistance of the chain. This is significant when loading the chain over a corner.

- **Intelligent profile** – because of the intelligent use of material, the major characteristics of the chain (i.e. fatigue resistance and bending resistance) were improved in a remarkable way, when you compare the same cross section of the profile chain versus the round steel chain. In order to reach the best mechanical performance, the material use was optimized on effective areas (blue area) and reduced on less relevant areas (red area)

- **Optimized bending resistance:**

The section modulus which is important for preventing undesirable bending deformation is up to 16% higher with the profile chain compared to round steel chain with the same cross section. Therefore the max. stress in the chain is reduced (no red areas)

- **50% higher lashing capacity** which also means 50% higher securing capacity compared to G80

- **With the same chain dimension** it is possible to secure more and heavier loads. Plus 50% compared to G8 and 20% compared to G10 (direct lashing)

Lashing capacity LC	Previous chain weight	pewag winner pro chain weight	% Reduction
60	14,5	10,3	29%
100	26,1	15,6	40%
160	37,7	30,7	18%

- **A 7 mm chain is also provided** in the pewag winner pro program
- **Patent-registered material** with optimized strength and toughness properties at both high and low temperatures
- In most cases when direct lashing **you can downsize to a smaller chain dimension thus obviously reducing weight and costs**. Example of direct lashing: 8 mm G12 (LC = 60kN) replaces 10 mm G8 (LC = 63kN)
- **When friction lashing** at the same securing capacity (STF) you can always downsize to a smaller chain dimension thus obviously reducing weight and costs

Lashing capacity LC	Previous chain-ø	pewag winner pro chain-ø
60	10	8
100	13	10
160	16	13

- **Considerably lower weight** when using pewag winner pro for lashing and therefore easier handling
- **Maximum safety** due to special lashing tag made from stainless steel with separate area for periodic inspections

pewag winner pro Lashing tag Identification

Novel lashing tags with warning marks made from stainless steel material which guarantee longer lasting than standard lashing tags and therefore increases the safety of the lashing system.

pewag winner pro Data

- **Chain quality:** pewag winner pro meets the PAS 1061 standard with modifications (higher mechanical and impact strength values, reduced application temperature)
- **Stress at lashing capacity:** 600 N/mm²
- **Fatigue test:** 20.000 cycles at 450 N/mm² nominal stress
- **Test stress:** 750 N/mm²
- **Breaking stress:** 1.200 N/mm²
- **Breaking elongation:** min. 20% regardless of surface
- **Bending:** 0,8 x d
- **Stress crack corrosion:**
Harmless against stress crack corrosion acc. to PAS 1061
- **Impact strength toughness:** 42J at -60°C
- **Admissible operation temperature:** -60°C – 300°C (please note WLL reduction at high temperatures)
- **Quality grade stamping:** pewag winner pro chain – 12 resp. 120 at a distance of 300 mm and 12 on the back of each link
pewag winner pro components – 12
- **Manufacturer's name or symbol:** D16 and/or pewag
- **Surface:**
Chain – light blue powdercoated – RAL 5012 or black corropo (PCP) coated – similar to RAL 9005
Components – light blue powdercoated – RAL 5012
- **Lashing tag:** All the required data are shown on the tag
- **Compatibility:** pewag winner pro chains and components have only limited compatibility with chains and components of other suppliers; combinations should be checked in advance with the manufacturer

pewag winner pro Lashing Example of order text

Below you will find an example of a finished pewag lashing chain that can be commercially ordered.

pewag winner pro 8 mm – one-piece lashing chain with shortener and clevis sling hook, assembled with connex-connecting links, Length: 3.500 mm.

ZRSWP 8 | KHSWP – KHSWP – PSWP 3500

This table provides information on how to get the best use from the pewag lashing systems. This table also shows you the maximum load which can be secured with 4 equal lashing systems given the angles and dynamic friction factors referred to. Additional securing methods (i.e. wedges, or similar) have not been taken into account. These could be used to secure loads with even higher weights. Please contact our customer service. Every lashing system has its own table. The maximum forces occurring due to acceleration, braking and avoidance maneuvers in road traffic acc. EN 12195-1 were taken into account. Other tables are applicable for transport by rail and sea. Please contact our customer service.

30	260	620	1.120	1.870	3.120	5.620

This table provides information on how to get the best use from the pewag lashing systems. This table also shows you the maximum load which can be secured with 1 lashing system given the angles and dynamic friction factors referred to. Please note that when friction lashing min. 2 lashing systems are needed. Additional securing methods (i.e. wedges, or similar) have not been taken into account. These could be used to secure loads with even higher weights. Please contact our customer service. The values in the table are applicable in the event that the same tension force (STF) is not effective in the lashing system on both sides of the load due to the deflection and edges. If this can be determined (e.g. using a pretensioning gauge), the values in the table may be increased by a factor of 1.3. The maximum loading weight depends on the STF value of the tensioning system – the value is shown on the lashing system's tag. Every lashing system has its own table. The maximum forces occurring due to acceleration, braking and avoidance maneuvers in road traffic acc. EN 12195-1 were taken into account. Other tables are applicable for transport by rail and sea. Please contact our customer service.

User information for pewag lashing program	59

User manual

for lifting and lashing in G12

User manual

User manual for assembly, use, storage and maintenance of pewag winner pro chain slings.

General

The pewag winner pro chain system can be used in a wide range of applications. These applications must be checked for suitability by a competent authorized person, or by pewag itself in the event of doubt. One major application field of the pewag winner pro chain system is overhead lifting. The following information was prepared for this area in acc. with EN 818-6. The specifications for assembling chain slings and rating of the capacity only refer to the uniform load method with angle ranges of 0-45° and 45-60°.

In addition, there is also an alternative method of rating the capacity. This method should only be used where weight and distribution of the load and the angles of the sling legs are known. In such cases please contact our technical department as the information given in this catalogue does not include details for chain sling rating using this alternative rating method! pewag winner pro lifting chains may only be assembled, tested and used by competent authorized people.

If used properly pewag winner pro lifting chains have a long service life and provide a high level of safety. Personal injury and damage to property can, however, only be prevented by proper use. It is, therefore, very important that you read and understand this user manual and act in a responsible and forward-thinking manner when using lifting equipment.

Limitations on use

The shape of the chain slings must not be modified – e.g. by bending, grinding, detaching individual parts, drilling, etc. The chain slings may also not be heated to above 300°C. Do not remove any safety components, such as latches, safety pins, safety catches, etc. Do not apply any surface coatings to pewag winner pro chain slings, e.g. do not subject them to hot dip galvanizing or electro galvanizing. Dipping or removing the coating with chemicals is also dangerous and must be agreed upon with pewag.

If necessary, please contact our technical department who will be pleased to provide.

Assembling chain slings

pewag winner pro chains and accessories may only be assembled by competent authorized people using pewag winner pro chains and accessories from the pewag winner pro chain system. When modifying or repairing pewag winner pro chain slings use only original parts supplied by pewag (e.g. bolts, safety pins, screws, etc.). pewag winner pro chains and components have only limited compatibility with chains and components of other suppliers. Compatibility should be checked in advance by competent authorized people. pewag will not be responsible for

any damage arising as a result of combination with products from a different supplier.

At any rate it is imperative to adapt the WLL to the weakest link in the assembly. Appropriate marking/labelling must be used to prevent the user from misinterpreting the load capacity. pewag winner pro chain slings must be labelled with specially developed identification tags for identification purposes. This tag may only be used if the WLL of the chain slings used is referred to in the table on pages 18+19. Deviating WLL (e.g. caused due to combination with products from a different supplier) must be highlighted with a separate tag (e.g. round shape).

Restrictions of use

due to hazardous or dangerous conditions (see table on page 20 of catalogue)

Effects of temperature

Reduction of the load capacity caused by high temperatures, as stated on page 20, ceases once the chain and/or lifting component returns to room temperature. pewag winner pro lifting accessories may not be used outside the temperature range stated. If this has nevertheless been the case, do not use the chain slings and remove them from service.

Effects of acids, caustics and chemicals

Do not subject pewag winner pro lifting accessories to acid or caustic solutions or use them in acid or caustic-laden atmospheres. Important: Certain production procedures release acids and/or fumes. Use of pewag winner pro lifting accessories in highly concentrated chemicals in combination with high temperatures is only permitted with explicit prior approval.

Working load limit

The working load limits in this catalogue and those on the chain sling have been determined on the basis that the loading of the chain sling is symmetrical and there are no particularly hazardous conditions. Such hazardous conditions would be offshore applications, the lifting of people and potentially dangerous loads, such as liquid metals, corrosive or caustic substances or nuclear material. If the chain sling is to be used for such purposes, the extent of the risk is to be assessed by an expert and the safe working load be adjusted accordingly.

Inspection and tests

Before using any lifting equipment for the first time, it should be ensured that:

- the chain sling corresponds exactly to the order
- the inspection certificate or certificate of conformity has been supplied
- marking and load capacity stated on the chain sling correspond to the information given on the inspection certificate or certificate of conformity
- all particularities of the chain sling have been entered into a register of lifting equipment, if required
- instructions for the proper use of chain sling has been supplied and read and understood by personnel

Check the chain slings before each use for visible damage or signs of wear. In case of doubt or damage do not use the chain slings and have them inspected by a competent person. After extraordinary, unusual events that could cause impairment

of the chain sling, the chain sling must be checked by an expert (e.g. after exposure to uncontrolled heat). As per EN 818 we recommend subjecting the chain sling every two years to a load test with 1.5 times the load capacity, followed by a visual inspection, or another type of crack test (fluxing).

Elimination criteria following visual inspection

- broken part
- missing or illegible marking of the chain sling, i.e. identification data and/or load capacity data
- deformation of suspension or sling parts or the chain itself
- elongation of the chain. The chain must be discarded if $t > 1,05 t_n$
- wear is determined as the mean value of two measurements of diameters d_1 and d_2 carried out at a right angle (see picture). The chain must be discarded if $dm = \frac{d_1 + d_2}{2} \leq 0,9 dn$
- for wear at the profile edges the criteria for withdrawal is $d < dn$

- cuts, notches, grooves, surface cracks, excessive corrosion, discoloration due to heat, signs of subsequent welding, bent or twisted links or other flaws
- cracks: Chains with cross-cracks that are visible to the naked eye must be discarded
- missing or non-functional safety device (safety latches if fitted) as well as signs of widening or twisting of hooks, i.e. noticeable enlargement of the opening or other forms of deformation. The enlargement of the opening must not exceed 10% of the nominal value. A jumped out safety catch shows an overload of the hook

Maximum approved dimensional change:

Designation	Dimensions	Admissible deviation
Chain	dn	-10%
	tn	+5%
	wear at edges	$d = dn$
Links	d	-10%
	t	+10%
Hooks	e	+5%
	d_2 and h	-10%
	g	+10%
Connecting links	halves must be moveable	must be given
	e	+5%
	c	-10%
	d	-10%
Clevis- and connex bolts	d	-10%

Maintenance and repair

pewag lifting accessories and chain slings should only be repaired by qualified personnel using genuine pewag parts.

Documentation

Records of inspections, and in particular their findings, as well as details of repairs carried out must be kept on file during the entire service life of the chain sling.

Storage

pewag chain sling should be stored in cleaned and dried condition and protected from corrosion, e.g. lightly lubricated.

Correct use of pewag winner pro chain sling

Angle of inclination – sling points

Select slinging points and chain sling type in such a way that the angles of inclination of all chain strands (legs) lie within the data given on the CE marked plate. All angles of inclination should preferably be the same. Avoid angles of inclination of less than 15°, because of the high risk of load instability. Never use chain slings with the angle of inclination exceeding 60°.

Edge load – protection of load and chain

The maximum load capacity of pewag chain slings was defined under the assumption that the individual chain legs are pulled straight under load, i.e. that they do not run over edges. In the case of edge loading, load protection (packing) should be used to avoid damage. For correct and incorrect use see below mentioned illustrations.

If chains are guided over edges without proper protection, their load capacity is reduced. For the corresponding load factors please refer to the table on page 20. But if chains looped at a beam or other round shaped loads the diameter should be minimum 3 times the chain pitch. For smaller diameters the WLL of the chains must be reduced by 50%.

Impact

The maximum load capacity of pewag chain slings are defined under the assumption that the load on the individual chain strands (legs) is applied without any impact or shock loading. In cases of possible impact/shock, the load factors on page 20 must be taken into consideration.

Impact/shock is defined as follows:

- slight impact: created, for example, when accelerating the lifting or lowering movement
- medium impact: created, for example, when the chain slips when adjusting to the shape of the load
- strong impact: created, for example, when the load falls into the unloaded chain

Vibrations

pewag winner pro chains and accessories are rated according to regulations for 20,000 load cycles. At high dynamic forces there may nevertheless be a risk of damage to the chain and accessories. According to the employer's liability insurance association Metall Nord Süd this risk may be prevented if the stress at load capacity limit is reduced by using a larger chain dimension.

Symmetrical loading

The load capacities of pewag chain slings are defined with the assumption that the load of the individual chain strands (legs) is symmetrically distributed. Lifting of the load then leads to identical angles of inclination, and the individual strands (legs) are symmetrical to each other.

The load can still be considered symmetrical when the following conditions are met:

- the load is smaller than 80% of the stated load capacity (WLL)
- the chain sling leg angles to the vertical are all not less than 15°
- the angles to the vertical of all chain legs are identical or deviate max. 15° from each other
- in the case of three and four strand sling chains, the corresponding plan angles are within 15° of each other

Example of asymmetry

The majority of the load is carried by I strand (leg)

The majority of the load is carried by II strand (legs)

If all of the listed parameters are not met, load is considered to be asymmetric and an expert must be called in to assess the lifting process. In case of doubt, only one chain strand (leg) should be considered as load-bearing. For the corresponding load capacity please refer to the load capacity table.

Use of pewag chain slings for other than the intended purposes

Use chain slings only for the intended purpose. In cases where not all individual strands (legs) are used simultaneously or where several chain slings are used at the same time, please refer to the load capacity table to find out the load capacity. In case of doubt or as an alternative, change the load capacity according to the following table.

Type of chain sling	Number of individual strands (legs) used	Use factor in relation to the load capacity given on the tag
two-stranded (II-leg)	1	1/2
three- and four-stranded (III/IV-leg)	2	2/3
three- and four-stranded (III/IV-leg)	1	1/3
2x single-stranded (single leg)	2	1,4
2x two-stranded (II-leg)	3 or 4	1,5

Hang any individual strands (leg) that you do not use, back into the master link to prevent hazards caused by freely swinging chains or unintended hooking.

Before using several chain slings at the same time, make sure that the crane hook is big enough for all the master rings. Make sure that the master rings cannot fall out of the hook during lifting. No angles of inclination of more than 45° allowed. Use only chain slings of the same nominal thickness and grade at the same time.

User manual

User manual for pewag winner pro lashing system

General

The information regarding the use of the pewag winner pro system for lifting can also be used by analogy for the lashing system. Attention must be paid to the following additional information:

pewag winner pro lashing chains have been developed for securing loads during transport. If properly used pewag winner pro lashing chains have a long service life and offer a high level of safety. Personal injury and damage to property may result from improper use. It is, therefore, very important that you read and understand this user manual and act in a responsible and forward-thinking manner when using lashing equipment.

We offer tools to assist with selection and proper usage of the lashing chain assemblies. Nevertheless, adequate experience of load securing and use of lashing equipment is indispensable. Only authorized people as defined by EN 12195-1 and 2 are allowed to assemble and use pewag winner pro lashing chain systems.

Important: lashing chains have safety factor = 2, lifting chains have safety factor = 4. This means that for safety reasons lashing chains must not be used as lifting chains. Therefore lashing chains must have the correct identification tag with the appropriate warning note.

The number of the lashing assemblies should be calculated according to EN 12195-1. Some impact loads may arise which will be balanced by the vehicle and by the flexibility of the lashing system.

Information on use

Lashing points

Choose lashing points so that the angles of the lashing chain assemblies are within the range given in our lashing table and so that the lashing chain assemblies are symmetrical to the driving direction. Use only lashing points with adequate strength. Deviations from this should only be considered after consulting our technical department.

Selection

Consider the lashing method required and the load that needs to be secured when selecting the lashing chain systems. Size, form, and weight of the load as well as the intended usage category (friction lashing, direct lashing,...) and the transport environment (additional utilities, lashing points,...). determine proper selection. Lashing chain systems should be used because of the high lashing capacity and the low elongation. We recommend to use the direct lashing method especially for the securing of heavy loads with the least possible lashing systems.

The number of the lashing systems should be calculated according to the EN 12195-1. In accordance with this standard, pewag has integrated the commonly used lashing methods in an easy

to use lashing table. Please look for more detailed info on pages 40 and 41. Use at least two pairs of lashing chain systems for stability for the direct lashing method. The chosen lashing chain systems must be strong and long enough for the intended purpose. In case of doubt safety is a priority rather than overloading the lashing chain system. The connecting parts (hooks, links) of the lashing chain systems must be moveable in the lashing point and adjustable in the tensile direction. Bending stress on the accessories and tip loading of the hooks are not permissible. Hooks must be loaded at the bearing area. Please use either lashing chain systems or lashing straps for the load securing because of the different performance and elongation of different lashing equipment under load (e.g. lashing chains and lashing straps made of synthetic fibre). If required please contact our technical customer service department.

Use

Always consider proper lashing practice. Before lashing, plan the lashing and the release/opening of the lashing system. During a long trip consider possible partial unloading.

Pay attention to overhead lines during loading and unloading. Remove lifting equipment before lashing. The maximum hand force of 50 daN for tightening the tensioning device should only be applied manually. Use of mechanical utilities i.e. rods or levers is forbidden. Consider sufficient edge protection. During transport check the tension of the lashing chain system repeatedly. Before opening the lashing chain system make sure that the load is safe also without securing and the people who unload are not in danger through goods that fall off or topple down. If necessary assemble the lifting equipment for possible further transport on the load to avoid the goods falling off or toppling down. Release the lashing chain systems as appropriate so that the load is free standing. Avoid the risk of the lashing chain getting caught during unloading.

Dynamic friction factor

The dynamic friction factor depends on the combination of the various materials used. The following table gives several „Dynamic friction factor“ of different material pairings in case of doubt, please consider the lower value as significant – (poor adhesion).

Material	dry	wet	oiled
Wood/Metal	0,20–0,50	0,20–0,25	0,05–0,15
Metal/Wood	0,20–0,50	0,20–0,25	0,02–0,10
Metal/Metal	0,10–0,25	0,10–0,20	0,01–0,10
Concrete/Wood	0,30–0,60	0,30–0,50	0,10–0,20
